Solutions | World Programming
Answers: A:1 Linear programming is a quantitative technique for selecting an optimum plan. It is an efficient search procedure for finding the best solution to a problem containing many interactive variables. The desired objective is to maximize some function e.g., contribution margin, or to minimize some function, e.g., costs. Determination of the optimum objective is usually subject to various constraints or restrictions on possible alternatives.

Past exam papers: Programming in C and C++. Solution notes are available for many past questions. They were produced by question setters, primarily for the benefit of the examiners. These are not model answers: there may be many other good ways of answering a given exam question!

Department of Computer Science and Technology: Past exam ...
Solution. Let . x be the number of units of X produced in the current week; y be the number of units of Y produced in the current week; then the constraints are: 50x + 24y <= 40(60) machine A time; 30x + 33y <= 35(60) machine B time ; x >= 75 - 30; i.e. x >= 45 so production of X >= demand (75) - initial stock (30), which ensures we meet demand; y >= 95 - 90
