Conversion problems are easy to get confused. One way to think of them is which is larger – quarts or gallons? Gallons are larger, so if you are converting from quarts to gallons the number of gallons will be a smaller number. Keeping that in mind, you can do a ‘commonsense’ check on your answer.

Metric Conversion Practice with answer key

The quantity in the problem is multiplied by one or more “conversion factors,” in which the numerator is equal to the denominator. Since the numerator and denominator of the conversion factor are equal, multiplying by the conversion factor is like multiplying by 1 and thus does not change the value of the original quantity.

Answers to Conversion Factor Problems—Chemistry LibreTexts

You can check your answers within the practice webpages. Jerry Artz at Hamline College has sample Unit Conversion problems, problem set 1 with some complex unit conversions and Problem set 2 with word problems. All of these links include answers. The School of Technology at Purdue University has three sets of Unit Conversion Practice problems. Answers are provided but not worked through.

Unit Conversions Practice Problems

Mathematics exercises. Unit conversion word problems. Practice unit conversion word problems on Math-Exercises.com - High quality selection of math problems.

Math Exercises & Math Problems: Unit Conversion Word Problems

Perhaps you can determine the answer in your head. If there are 100 cm in every meter, then 3.55 m equals 355 cm. To solve the problem more formally with a conversion factor, we first write the quantity we are given, 3.55 m. Then we multiply this quantity by a conversion factor, which is the same as multiplying it by 1.
