Systems engineering (SE) is recognized as a key contributor to successful systems acquisition and is equally important for SoS. This guide examines the SoS environment as it exists in the DoD today and the challenges it poses for systems engineering. It identifies seven core SoS SE elements needed to evolve and sustain SoS capabilities

Systems Engineering Guide for Systems of Systems, V 1
A systems engineer in the DoD will develop, design, allocate, and manage user and system level requirements (see

Technical Processes
Overview. Whereas the technical management processes provide insight of, and control over, the technical development of a system throughout its life cycle, the technical processes are used to design, develop and analyze the system, system elements and enabling system elements required for integration, test, production, deployment, support, operation and disposal.

- Defense Acquisition University

The systems engineering process is applied to each level of system development, one level at a time, to produce these descriptions commonly called configuration baselines. This results in a series of configuration baselines, one at each development level. These baselines become more detailed with each level. In the Department of Defense (DoD) the configu-

The Department of Defense (DoD) sponsor uses the DoD 5000.02 process to describe a "five stage" systems engineering life cycle [1]. This DoD 5000.02 life-cycle model maps to other equivalent models described (e.g., International Organization for Standardization [ISO] 15288 Systems and Software Engineering Life Cycle Processes [2], and Institute of Electrical & Electronics Engineers [IEEE] 1220-2005 Standard for Application and Management of the Systems Engineering Process [3]).

In NASA's engineering design life cycle, design reviews are held for technical and programmatic accountability and to authorize the release of funding to a project. This article describes the major phases of that systems engineering process. A design review provides an in-depth assessment, by an independent team of discipline experts and managers, that the design (or concept) is realistic and attainable from a programmatic and technical sense.
