City College of New York - Mechanical Engineering ...

Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration ( $a=0$ ), but rather, are in static equilibrium with their environment. The application of Newton's second law to a system gives:  $\sum \mathbf{F} = m\mathbf{a}$ . Where bold font indicates a vector that has magnitude and direction.

Engineering Mechanics: Statics & Dynamics - CosmoLearning

Statics is the study which deals with the condition of bodies in equilibrium subjected to external forces. In other words, when the force system acting on a body is balanced, the system has no external effect on the body, the body is in equilibrium. Dynamics is also a branch of mechanics in which the forces and their effects on the bodies in motion are studied.
