To gain the best possible understanding of an archaeological site, researchers collect evidence of the natural and cultural events that happened there.**

The Site Formation Processes in Archaeology

Formation Processes of the Archaeological Record synthesizes the most important principles of cultural and environmental formation processes. It is intended as both introduction and guide in method and theory, fieldwork and analysis.

The Formation Processes of the Archaeological Record (Me ...

Formation processes are the events that affect how sites of human activity came to be buried and what happened to them afterwards. Each site has evidence of use and abandonment. Once the site ceases to have human activity present, it becomes subject to a myriad of events that dictate its potential survival and future in the archaeological record.

Formation Processes of Archaeological Record, MP Leone, SM ...

Posted in Core Skills Site formation is a basic building block of archaeology: it is by analysis of this sequence through excavation that permits interpretation, which should in turn lead to discussion and understanding. Main forms are Material Activity or Construction, Deposition, Re-deposition, Natural action or Decay.

Understanding Site Formation

most archaeological sites have more than one soil level forming their stratigraphy. The following exercise illustrates the process of site formation using a Hopi Indian "pit house" site (a structure constructed partially underground).

Site Formation in Archaeology

Natural Formation Processes Natural formation processes are events occurring naturally that affect the preservation of the archaeological record. This is usually gradual covering by sand or soil blown by the wind, but can also include burial on a much larger scale, such as mud slides or volcanic eruptions.
