Generalized Theory Of
Electrical Machines

The generalized theory of electrical machines is developed for a generalized machine having a number of coils with their axes located on the fixed d- and q-axes. Some machines may require fewer than 4 coils to represent them, while others may require

generalized theory of electrical machines or two-axis theory of electrical machines. Park developed two-axis equations of the synchronous machines by making use of appropriate transformations. Park's ideas were then developed by Kron to deal with all rotating electrical machines in a systematic manner by tensor analysis. However, Gibbs et al. simplified the work of Kron by applying matrices to the electrical machines analysis.
