Chemistry Chapter 1 holt Flashcards | Quizlet The physical properties of matter are any properties that can be perceived or observed without changing the chemical identity of the sample. In contrast, Page 22/46

chemical properties are those that can only be observed and measured by performing a chemical reaction, thus changing the molecular structure of the sample.

Physical Properties of Matter - ThoughtCo Physical Properties: Physical properties can be observed or measured without changing the composition of matter. Physical properties are used to observe and Page 24/46

describe matter. Physical properties include: appearance, texture, color, odor, melting point, boiling point, density, solubility, polarity, and many others.

<u>Physical Properties -</u> Page 25/46

Department of Chemistry The measurement of a physical property can change the arrangement of matter in a sample but not the structure of its molecules. In other words, a physical property might involve a Page 26/46

physical change but not a chemical change. If a chemical change or reaction occurs, the observed characteristics are chemical properties.
