Publications for Cooperatives | Rural Development  
Previous studies on dairy farmers' self-reported value of cooperative membership showed that farmers may benefit from cooperatives in a way of (a) having a stable market channel, (b) low transaction cost, since a cooperative obligated to collect agricultural products, and (c) competitive producer price .

India is the largest producer of milk with a share of 14.5 per cent of the total world's milk production. Dairy cooperatives have played an important role to improve the economy of milk producers' in different regions of the country. It has not only provided organized network of milk marketing to the rural households, but also provided the crucial technical inputs like provision of artificial insemination, health services and feed inputs. Thus, considering the significant role of dairy cooperatives in socio-economic development of rural economy, an attempt been made to assess the impact of dairy cooperatives in this book. In order to assess the impact of dairy cooperatives on the overall economy of rural households, socio-economic parameters such as production, consumption, marketed surplus of milk, cost of milk production, income and employment were taken into account. All these parameters were explained with the help of tabular and functional analysis. The subject matter has been presented in simple language. This book can serve as a good reference material for the students, teachers/scientists, researchers, policy makers, staff of agricultural economics and dairy economics.

In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

This study carried out in Nepal in 2009 to analyze the economic situation of dairy cooperatives and its impact on dairy farmers showed that the dairy cooperatives operating at different scales were operating in profit. The net capital ratio for small, medium and large scale was found to be 1.432, 1.01 and 1.127 respectively while the solvency ratio was found to be 0.88, 0.98 and 0.70 respectively and turn over ratio was10.2%,3% and 15.11% respectively. Impact on associated farmer members with cooperatives of different scales reveled that there was no such distinct impact based on scales of operation. However, farmers associated with large scale cooperatives were benefiting from support services like obtaining feed, bran etc in credit. Gender-wise distribution of dairy activities was comparable. It is suggested that Government should create a more enabling environment for dairy sector like providing subsidy in the electricity to the cooperatives, extension services to the farmers, reviewing of the milk price etc. Likewise, dairy cooperatives should also provide more support services to the associated farmer members.
