I used Housecroft and Shriver/Atkins for undergrad Inorganic. They served as much needed compliments for eachother. Of the two, Shriver was stronger, but I'm not sure it would have been an ideal stand-alone text. I would also recommend Metal-Ligand Bonding by Janes and Moore. This combination was my Inorganic Chem elixir. Hope this helps.

Got this textbook for my Inorganic lab class. It's an alright book, but there are many errors and it seems like the authors ramble on in some places and don't explain things too well. It may be easier to use for people who have a better understanding of inorganic chemistry, but I found it kind of difficult to follow.
