signal development in the social sciences. As the social sciences evolved methodologically, however, many dismissed area studies as favoring narrow description over general theory. Still, area studies continues to plays a key, if unacknowledged, role in bringing new data, new theories, and valuable policy-relevant insights to social sciences. In *Comparative Area Studies*, three leading figures in the field have gathered an international group of scholars in a volume that promises to be a landmark in a resurgent field. The book upholds two basic convictions: that intensive regional research remains indispensable to the social sciences and that this research needs to employ comparative referents from other regions to demonstrate its broader relevance. *Comparative Area Studies (CAS)* combines the context-specific insights from traditional area studies and the logic of cross- and inter-regional empirical research. This first book devoted to CAS explores

Here, for the first time, is an annotated English translation of the eleven later panegyrics (291-389 C.E.) of the XII Panegyrici Latini, with the original Latin text prepared by R. A. B. Mynors. Each panegyric has a thorough introduction, and detailed commentary on historical events, style, figures of speech, and rhetorical strategies accompanies the translations. The very difficult Latin of these insightful speeches is rendered into graceful English, yet remains faithful to the original.

In the present text the author deals with both conventional and new approaches to trade theory and policy, treating all important research topics in international economics and clarifying their mathematical intricacies. The textbook is intended for undergraduates, graduates and researchers alike. It addresses undergraduate students with extremely clear language and illustrations, making even the most complex trade models accessible. In the appendices, graduate students and researchers will find self-contained treatments in mathematical terms. The new edition has been thoroughly revised and updated to reflect the latest research on international trade.

economic development, and provide good governance. In the developing world, countries differ substantially in their levels of state capacity and ability to achieve these ends, leaving scholars and concerned citizens alike wondering about the origins of such inequalities. In *State Building in Boom Times*, Ryan Saylor argues that commodity booms and coalitional politics are central to understanding variations in state building within and across Latin America and Africa. He shows how resource booms can trigger the provision of new public goods and institution building, thus helping countries expand their state capacity. But these possibilities hinge on coalitional politics, as he demonstrates through six cases. Countries ruled by export-oriented coalitions (Argentina, Chile, and Mauritius) expanded their state capacity as a direct result of commodity booms. Countries in which exporters were politically marginalized (Colombia,

Ghana, and Nigeria) missed analogous state building opportunities because ruling coalitions preyed upon export wealth, rather than promoting export interests-which in turn undercut state building. The coalitional basis of these divergent outcomes suggests that, contrary to the prevailing belief in a "resource curse" natural resource wealth does not doom countries to low state capacity. Instead, export-oriented coalitions can harness boom times for developmental gains, even in the context of weak institutions. Saylor's work encourages us to reexamine widespread assumptions about the relationship between resource wealth and state building, particularly the resource curse. *State Building in Boom Times* elucidates which public policies best serve developing countries trying manage their natural resource wealth.
