Skill 1: Evaluating Functions Evaluating functions involves putting numbers into the function to get the result. Example: A function is given by $f(x) = 3x + 1$, Find $f(10)$ All this requires is to replace x with 10 and calculate the result.. When we input 10 into this function that would look like: $f(10) = 3 \times 10 + 1 = 31$

The central focus is on the convergence of three mathematical topics: the hypergeometric and related linear differential equations, group theory, and on-Euclidean geometry. The text for this second edition has been greatly expanded and revised, and the existing appendices enriched. The exercises have been retained, making it possible to use the book as a companion to mathematics courses at the graduate level.
