The ISO Guide 30 / Guide 31 / Guide 33 / ISO 17034 / Guide 35 Reference Materials Package enables the transfer of the values of measured or assigned properties between testing and measurement laboratories. It also provides guidance on transferring values of measured or assigned physical, chemical, biological or technological quantities between one place and another.

This well-known QA manual has been updated to provide the guidance readers need to assess their compliance with standard regulations. This Volume 2 of a three-part package contains the full text on: * FDA regulations* EC and IPEC guidelines* ISO/BSI standards referenced in the checklists furnished in volume 1 Easy-to-read and organized to provide fa

This work details minor, trace and ultratrace methods; addresses the essential stages that precede measurement; and highlights the measurement systems most likely to be used by the pragmatic analyst. It features key material on inclusion and phase isolation. The book is designed to provide useful maps and signposts for metals analysts who must verify that stringent trace level compositional specifications have been met.

Clinical pharmacology plays an important role in today's medicine. Due to the high sensitivity, selectivity, and affordability of a mass spectrometer (MS), the high performance liquid chromatography - mass spectrometry (LC-MS) analytical technique is widely used in the determination of drugs in human biological matrices for clinical pharmacology. Specifically, LC-MS is used to analyze: anticancer drugs antiepileptic drugs antifungal drugs antidepressant drugs antipsychotic drugs antiretroviral drugs anxiolytic/hypnotic drugs cardiac drugs drugs for addiction immunosuppressant drugs mood stabilizer drugs This book will primarily cover the various methods of validation for LC-MS techniques and applications used in modern clinical pharmacology.

Metrological traceability of chemical measurement results means the establishment of a relation to metrological stated references through an unbroken chain of comparisons. This volume collects 56 outstanding papers on the topic, mostly published in the period 2000-2003 in the journal "Accreditation and Quality Assurance". They provide the latest understanding, and possibly the rationale why it is important to integrate the concept of metrological traceability including suitable measurement standards such as certified reference materials, into the standard measurement procedures of every analytical laboratory. In addition, this anthology considers the benefits to both the analytical laboratory and the user of the measurement results.

Atomic Emission Spectrometry is a powerful analytical method which is utilized in academia and industry for quantitative and qualitative elemental analysis. This publication is an excellent guide to the technique, explaining the underlying theory and covering practical measurement applications. Extremely well-written and organized, this book is a beneficial instrument for every scientist or professional working with AES.
