Both AC and DC circuits can be solved and simplified by using these simple laws which is known as Kirchhoff's Current Law (KCL) and Kirchhoff's Voltage Law (KVL). Also note that KCL is derived from the charge continuity equation in electromagnetism while KVL is derived from Maxwell – Faraday equation for static magnetic field (the derivative of B with respect to time is 0)

With KCL, if we had a voltage source that wasn't connected directly to reference ground, we would create a supernode and then, as part of the process, we would need to do a bit of KVL to finish the analysis. With KVL, if we have a current source that is shared between two meshes, we need to treat it in a similar way.
