Note: As the cover says this is the unfinished 1st edition. I decided to publish it with teasers to expanded topics, and some parts cannot be expanded upon until I can pay for the content of material from other sources. Please be patient.A fatal flaw in the most fundamental model of nature has been overlooked for so long that many people do not question it.The transverse wave model of photons has failed at almost every prediction its proponents made.And the proof of its validity as a model for photons has failed to consider that longitudinal waves accomplish the same thing in most experiments.Extraordinary claims demand evidence, not excuses or waving off the explanation to another dimension or particle.Dark energy is based on the apparent redshift of most of the visible universe, and since transverse wave photons have no apparent mechanism to become red-shifted the conclusion made was the entire universe must be expanding.And dark energy must be the cause.Despite the obvious failures of the transverse wave photon model, and inconvenient facts like that of longitudinal density waves behaving in a similar manner in a number of experiments.Longitudinal density waves also experience gap diffraction, produce the same electrical-magnetic profile if you consider varying density, and that a longitudinal wave with an elliptical profile is polarizable. These were the key proofs that photons had to be transverse waves. Yet, longitudinal density waves accomplish the same thing.More importantly they spread out naturally as you can't keep a longitudinal wave focused so that is does not disperse. And thus they become red-shifted naturally. No need for dark energy, an expanding universe and no big bang.Add to that the varying density, and you automatically get the photoelectric effect, and no UV Catastrophe. In contrast, the transverse wave model failed at predicting the photoelectric effect and the UV Catastrophe.As a bonus, you get an entirely new physical model for electrons and positrons. And with that, answers to many questions that others failed to realized this path could lead to.Potential explanations that make sense. Unlike those who try to defer an answer to another particle or dimension.Einstein considered the same basis of a path to a solution to the problems he saw, but he was actually discouraged by others to follow this line of reasoning and where it might lead. The "ghost waves" lead to a mechanical solution to various mysteries he pondered as well as spooky-action-at-a-distance.This is an opportunity for someone to come up with a mathematical description for various parts of this model. See the link within the book for more information and the contest/challenge.
