- If your bev must function for you on all bands (ie 40 80 160) as is usually the case, then I think the 1 or 1.5 wavelength versions above will provide the best overall performance. Again, I cant over emphasize, "whatever u put up that is 200' or longer is going to provide improved low band reception" W3LPL' words cont.

Note: The top of this page has links to various receiving antennas such as Beverage, "magnetic" loop, and vertical low-noise DX receiving antennas. How Low-noise Receiving Antennas really work This area deals primarily with low noise antennas, and discusses effect of antenna directivity on weak-signal reception.
