V-Belt Drive Installation and Maintenance Manual These instructions must be read thoroughly before installation or operation. Check Sheave Alignment Sheave alignment should be checked by placing a straight edge or tight cord across the sheave faces so that it touches all four points of contact. Ordinarily, a misalignment of more than one-

maintenance, both while the drive is running and while it is stationary. Inspection while running A noisy V-belt drive is like a person with a fever. Both need attention. V-drive noise can be caused by the slapping of belts against the drive guard or other obstruction. Check for an improperly installed guard, loose belts or excessive vibration.

~~Installation & Maintenance of V-Belt Drives~~

When replacing V-belts, maintenance professionals must verify that the replacements are the correct size. The belt should ride in the groove with its top flat surface level with the outer edge of the sheave. Belts should always be installed in matched sets, and never install belts from different manufacturers on the same motor.

Observing signs of unusual belt wear or damage will help troubleshoot possible drive problems . Mark or note a point on the belt, or on one of the belts in a multiple V-belt drive . Wearing gloves, work around the belt(s), checking for cracks, frayed spots, cuts, or unusual wear patterns . Beware of pinch points . Keep hands and

~~BELT DRIVE PREVENTIVE MAINTENANCE AND SAFETY MANUAL~~

f Standard V-belts require a regular maintenance programme for a long period of trouble free operation. Preventive maintenance helps you to avoid expensive failures and ensures optimum belt drive performance, maximising productivity - making it a shrewd investment. A complete and effective maintenance programme should include following elements:

~~GATES INDUSTRIAL POWER TRANSMISSION~~

and Micro-V® belts should be within 1/4° or 1/16" per foot of drive center distance. The greater the misalignment, the greater the chance of belt instability, increased belt wear, noise, vibration and V-belt turnover. Guard Inspection Check guard for wear or possible damage. Don't over-look wear on the inside of guard. Clean the guard to

Belts should always be stored upright in the factory package until used in a cool, dry building and in an area free from sunlight. If possible, store the belt roll suspended on a tube, bar or support stand. Where suspension is not possible, the roll should be stored on a dry surface and rotated 90° every 6 months.
