Physics and Mathematics, B.S. | NYU Tandon School of ...

This program is based on the B.S. in Physics but with certain substitutions in the course requirements. Several of the laboratory courses are replaced by advanced mathematics courses and some of the undergraduate physics courses are replaced by similar graduate courses. This program is distinct from the B.S. in Mathematics and Physics, which is a coherent and parallel education in both mathematics and physics administered jointly by both departments.

Following mathematics: the theory of partial differential equation, variational calculus, Fourier analysis, potential theory, and vector analysis are perhaps most closely associated with mathematical physics. These were developed intensively from the second half of the 18th century (by, for example, D'Alembert, Euler, and Lagrange) until the 1930s.. Physical applications of these developments ...
