The present book entitled AN OBJECTIVE BOOK OF PLANT PATHOGENS combines a series of model papers which deals with brief introduction about plant pathogens, basic concepts and terminology in Mycology, Bacteriology, and Virology. It also includes recent fungal classification (Kirk et al. 2008). This book has been to cover the courses offered by Indian Universities and it is mainly helpful for graduate and postgraduate students for various SAUs exams and other competitive examinations like SRF, JRF, NET and ARS conducted by ICAR.

To Meet The Food Demands Of Ever Increasing Human Population, Agricultural Production Is Being Augmented Through The Use Of New Crop Varieties And Changed Agronomic Practices. These Practices Have Enormously Increased The Incidence Of Several Pests And Diseases. Plant Diseases Cause Serious Threats To The Successful Cultivation Of Agricultural Crops Resulting In Huge Losses In Their Yields. In The Recent Past, Certain Diseases Have Appeared In Epidemic From Endangering Sustainability In Agriculture. The Destructive Potential Of Plant Diseases In Modern Day Agriculture Has Increased Due To The Use Of Cultivars Having Narrow Genetic Base Over Large Areas. Correct Disease Diagnosis Is The Prime Requirement For Recommending Preventive Or Curative Measures For Effective Disease Management. Knowledge Of Perpetuation And Spread Of The Pathogens And Various Factors Affecting Disease Development Is Necessary. All The Available Strategies Must Be Used In An Integrated Manner And A Holistic Approach Needs To Be Developed For The Management Of Major Diseases Of A Crop. Information On Latest Developments In The Understanding And

also teachers, researchers, extension workers and development officers for reference and easy answering of many complicated questions of all related disciplines of agriculture. Fundamentals of Agriculture covers the course contents of competitive examinations like IAS, IFS, PCS, ARS, Banking services, B.Sc./M.Sc./Ph.D. (Ag) admission, states and national levels of different competitions in agriculture. The entire book is prepared in most simple, clear, talking language, comprehensive and short descriptive types of questions so that the concepts could be easily understand by the readers in short times. Hence, this book can solve as a single platform for preparation of different competitive examinations in agriculture.

This textbook addresses the main economic principles required by agricultural economists involved in rural development. The principles of 'micro-economics' or 'price-theory' are of relevance to economists everywhere, but this book reinforces the message of their relevance for rural development by explaining the theory in the specific context of the agricultural and food sectors of developing countries. Hypothetical and actual empirical illustrations drawn almost exclusively from such countries distinguish this book from other economic principles texts that draw their examples almost invariably from industrialised countries, and also from books more oriented to the issue of rural development. The first half of the book deals with the underlying principles of production, supply and demand. These are essential tools for the study and management of the agricultural sector and food markets. In the second half, supply and demand are brought together into a chapter of equilibrium and exchange. This is followed by chapters on trade and the theory of economic welfare. In the final chapter it is shown that much of the material in the earlier chapters can be combined by agricultural economists into a system for analysing and comparing the effects of alternative agricultural policies. The ability of agricultural

economics to provide a consistent framework for the analysis of policy problems thus enables it to make a key contribution to rural development.

The use of living organisms to make or develop or modify products is under the broad field of biotechnology. Plant biotechnology is a branch of this discipline that is concerned with the application of the techniques of biotechnology for plant breeding and improvement. Some of the objectives include improving plant quality, increasing crop yield, increasing tolerance to environmental stresses, viruses, fungi, bacteria and pests. Such modifications are of immense use in agriculture. The techniques of marker assisted selection, doubled haploidy, reverse breeding and genetic modification facilitate such changes. This book is compiled in such a manner, that it will provide in-depth knowledge about the theory and practice of plant biotechnology. It aims to shed light on some of the unexplored aspects of this field. This book is an essential guide for both academicians and those who wish to pursue this discipline further.
