**MIG Welding – Welders Manual**

MIG welding uses an arc of electricity to create a short circuit between a continuously fed anode (+ the wire-fed welding torch) and a cathode (- the metal being welded). The heat produced by the short circuit, along with a non-reactive (hence inert) gas locally melts the metal and allows them to mix together.

The Goplus MIG 130 has automatic thermal cut out should the flux core welder overheat. You won't be able to weld until the welder cools down but don't turn off the welder. The Goplus MIG 130 needs the power on so that the internal fan can keep turning to cool the welder down. Down to a level where you can start welding again.
