A well-rounded and articulate examination of polymer properties at the molecular level, Polymer Chemistry focuses on fundamental principles based on underlying chemical structures, polymer synthesis, characterization, and properties. It emphasizes the logical progression of concepts and provide mathematical tools as needed as well as fully derived problems for advanced calculations. The much-anticipated Third Edition expands and reorganizes material to better develop polymer chemistry concepts and update the remaining chapters. New examples and problems are also featured throughout. This revised edition: Integrates concepts from physics, biology, materials science, chemical engineering, and statistics as needed. Contains mathematical tools and step-by-step derivations for example problems. Incorporates new theories and experiments using the latest tools and instrumentation and topics that appear prominently in current polymer science journals. Polymer Chemistry, Third Edition offers a logical presentation of topics that can be scaled to meet the needs of introductory as well as more advanced courses in chemistry, materials science, polymer science, and chemical engineering.

Microwave Chemistry has changed the way to work in chemical laboratories and is an established state-of-the-art technology to accelarate and enhance chemical processes. This book not only gives an overview of the technology, its historical development and theoretical background, but also presents its exceptionally broad spectrum of applications. Microwave Chemistry enables graduate students and scientist to learn and apply its methods successfully.

This comprehensive, truly one-stop reference discusses monomers, methods, stereochemistry, industrial applications and more. Chapters written by internationally acclaimed experts in their respective fields cover both basic principles and up-to-date information, ranging from the controlled ring-opening polymerization methods to polymer materials of industrial interest. All main classes of monomers including heterocyclics, cyclic olefins and alkynes, and cycloalkanes, are discussed separately as well as their specificities regarding the ring-opening polymerization techniques, the mechanisms, the degree of control, the properties of the related polymers and their applications. The two last chapters are devoted to the implementation of green chemistry in ring-opening polymerization processes. Of much interest to chemists in academia and industry.

North Korea has posed a threat to stability in Northeast Asia for decades. Since Kim Jong-un assumed power, this threat has both increased and broadened. Since 2011, the small, isolated nation has detonated nuclear weapons multiple times, tested a wide variety of ballistic missiles, expanded naval and ground systems that threaten South Korea, and routinely employs hostile rhetoric. Another threat it poses has been less recognized: North Korea presents a potentially greater risk to American interests by exporting its weapons systems to other volatile regions worldwide. In North Korean Military Proliferation in the Middle East and Africa, Bruce E. Bechtol Jr. analyzes relevant North Korean military capabilities, what arms the nation provides, and to whom, how it skirts its sanctions, and how North Korea's activities can best be contained. He traces illicit networks that lead to state and nonstate actors in the Middle East, including Syria, Iran, Hezbollah, and Hamas, and throughout Africa, including at least a dozen nations. The potential proliferation of nuclear and chemical weapons technology and the vehicles that carry it, including ballistic missiles and artillery, represent a broader threat than the leadership in Pyongyang. Including training and infrastructure support, North Korea's profits may range into the billions of dollars, all concealed in illicit networks and front companies so complex that the nation struggles to track and control them. Bechtol not only presents an accurate picture of the current North Korean threat -- he also outlines methodologies that Washington and the international community must embrace in order to contain it.

Sport has been practised in the Greco-Roman world at least since the second millennium BC. It was socially integrated and was practised in the context of ceremonial performances, physical education and established local and international competitions including, most famously, the Olympic Games. In recent years, the continuous re-assessment of old and new evidence in conjunction with the development of new methodological perspectives have created the need for a fresh examination of central aspects of ancient sport in a single volume. This book fills that gap in ancient sport scholarship. When did the ancient Olympics begin? How is sport depicted in the work of the fifth-century historian Herodotus? What was the association between sport and war in fifth- and fourth-century BC Athens? What were the social and political implications of the practice of Greek-style sport in third-century BC Ptolemaic Egypt? How were Roman gladiatorial shows perceived and transformed in the Greek-speaking east? And what were the conditions of sport participation by boys and girls in ancient Rome? These are some of the questions that this book, written by an international cast of distinguished scholars on ancient sport, attempts to answer. Covering a wide chronological and geographical scope (ancient Mediterranean from the early first millennium BC to fourth century AD), individual articles re-examine old and new evidence, and offer stimulating, original interpretations of key aspects of ancient sport in its political, military, cultural, social, ceremonial and ideological setting. This book was previously published as a special issue of the International Journal of the History of Sport.

North Korea has remained a thorn in the side of the United States ever since its creation in the aftermath of the Korean conflict of 195001953. Crafting a foreign policy that effectively deals with North Korea, while still ensuring stability and security on the Korean Peninsula-and in Northeast Asia as a whole-has proved very challenging for successive American administrations. In the wake of ruler Kim Jong-il's death in December 2011, analysts and policymakers continue to speculate about the effect his last years as leader will have on the future of North Korea. Bruce Bechtol, Jr. contends that Kim Jong-il's regime (1994-2011) exacerbated the threats that North Korea posed, and still poses, to the world. Bechtol explains how North Korea presents important challenges on five key fronts: its evolving conventional military threat, its strategy in the Northern Limit Line (NLL) area, its nuclear capabilities, its support for terrorism, and its handling of the succession process. Bechtol's analysis clears up the persistent mystery of how Kim Jong-il's dysfunctional government in its final years was able to persist in power while both presenting a grave danger to its neighbors and setting the stage for the current government. This work addresses issues important for policymakers and academics who must deal with those in power in North Korea.

Some states have violated international commitments not to develop nuclear weapons. Yet the effects of international sanctions or positive inducements on their internal politics remain highly contested. How have trade, aid, investments, diplomacy, financial measures and military threats affected different groups? How, when and why were those effects translated into compliance with non-proliferation rules? Have inducements been sufficiently biting, too harsh, too little, too late or just right for each case? How have different inducements influenced domestic cleavages? What were their unintended and unforeseen effects? Why are self-reliant autocracies more often the subject of sanctions? Leading scholars analyse the anatomy of inducements through novel conceptual perspectives, in-depth case studies, original quantitative data and newly translated documents. The volume distils ten key dilemmas of broad relevance to the study of statecraft, primarily from experiences with Iraq, Libya, Iran and North Korea, bound to spark debate among students and practitioners of international politics.
