Software Development on the SAP HANA Platform is a general tutorial
guide to SAP HANA.This book is written for beginners to the SAP HANA
platform. No knowledge of SAP HANA is necessary to start using this
book.

This IBM® Redpaper Redbooks publication provides guidance about a
backup and recovery solution for SAP High-performance Analytic
Appliance (HANA) running on IBM Power Systems. This publication
provides case studies and how-to procedures that show backup and
recovery scenarios. This publication provides information about how to

protect data in an SAP HANA environment by using IBM Spectrum® Protect and IBM Spectrum Copy Data Manager. This publication focuses on the data protection solution, which is described through several scenarios. The information in this publication is distributed on an as-is basis without any warranty that is either expressed or implied. Support assistance for the use of this material is limited to situations where IBM Spectrum Scale or IBM Spectrum Protect are supported and entitled, and where the issues are specific to a blueprint implementation. The goal of the publication is to describe the best aspects and options for backup, snapshots, and restore of SAP HANA Multitenant Database Container (MDC) single and multi-tenant installations on IBM Power Systems by using theoretical knowledge, hands-on exercises, and documenting the findings through sample scenarios. This document provides resources about the following processes: Describing how to determine the best option, including SAP Landscape aspects to back up, snapshot, and restore of SAP HANA MDC single and multi-tenant installations based on IBM Spectrum Computing Suite, Red Hat Linux Relax and Recover (ReAR), and other products. Documenting key aspects, such as recovery time objective (RTO) and recovery point objective (RPO), backup impact (load, duration, scheduling), quantitative savings (for example, data deduplication), integration and catalog currency, and tips and tricks that are not covered in the product documentation. Using IBM Cloud® Object Storage and documenting how to use IBM Spectrum Protect to back up to the cloud. SAP HANA 2.0 SPS 05 has this feature that is built in natively. IBM Spectrum Protect for Enterprise Resource Planning (ERP) has this feature too. Documenting Linux ReaR to cover operating system (OS) backup because ReAR is used by most backup products, such as IBM Spectrum Protect and Symantec Endpoint Protection (SEP) to back up OSs. This publication targets technical readers including IT specialists, systems architects, brand specialists, sales teams, and anyone looking for a guide about how to implement the best options for SAP HANA backup and recovery on IBM Power Systems. Moreover, this publication provides documentation to transfer the how-to-skills to the technical teams and solution guidance to the sales team. This publication complements the documentation that is available at IBM Knowledge Center, and it aligns with the educational materials that are provided by IBM GarageTM for Systems Technical Education and Training.

IBM® invented the virtualization technology starting in the 1960s on
the mainframe, and the functionalities evolved and were ported to
other platforms and improved the reliability, availability, and
serviceability (RAS) features. With virtualization, you achieve better
asset utilization, reduced operating costs, and faster responsiveness
to changing business demands. Every technology vendor in the SAP
ecosystem understands virtualization as slightly different
capabilities on different levels (storage and server hardware,
processor, memory, I/O resources or the application, and so on). It is
important to understand exactly what functionality is offered and how
it supports the client's business requirements. In this IBM Redbooks®
publication we focus on server virtualization technologies in the IBM
Power SystemsTM hardware, AIX®, IBM i, and Linux space and what they
mean specifically for SAP applications running on this platform. SAP
clients can leverage the technology that the IBM Power Systems
platform offers. In this book, we describe the technologies and
functions, what they mean, and how they apply to the SAP system
landscape.

Since SAP is emphasizing recent developments in operations management
in its SCM initiative, this book describes the methodological
background from the viewpoint of a company using SAP systems. It
describes order processing both in an intra- and interorganizational
perspective, as well as describing future developments and system
enhancements.

The goal of this text is to describe the technical design aspects of
the IT infrastructure; it does not give the details of installing and
customizing SAP software, nor business process reengineering. Using
primarily HP products for the solution examples, the chapters guide

the reader through the foundation of the systems from an IT perspective, reviews its business application and architecture and introduces the server systems, then describes data storage, high availability and recovery solutions, client PCs with front-end user interfaces, output management and printing solutions, network infrastructure and requirements, cabling designs, LANs and WANs, and connecting mySAP.com to the Internet. Both authors are members of the HP-SAP International Competence Center. Annotation copyrighted by Book News, Inc., Portland, OR
