Renewable energy exploration, development and demand has always been on an upward trend. Factors such as environmental impact, depleting fossil fuel stocks and volatile oil prices have had a significant impact on the desire to increase the generation of renewable energy. Between 2010 and 2014, renewable energy consumption of the top countries has effectively doubled from 168 million tons to ...

Meanwhile, buildings contribute 17.5% of energy-related emissions overall—which makes sense when you realize the stunning fact that cities use 60-80% of the world's annual energy needs. With megacities (home to 10+ million people) ballooning every day to house the growing urban population, these shares may rise even further.
