This book offers an account of contemplative reflection in qualitative social research.

Focusing on the experiences of the researcher – including sensory and emotional experiences – and the work of the mind in the investigative process, it considers the means by which the researcher's basic assumptions can be analysed and bracketed, so as to shed light on the process by which knowledge is produced. Through an exploration of the methods of meditation, auto-observation and self-reports, epoché, 'contemplative memo-ing', and the contemplative diary, the author explores the essential role of subjectivity in qualitative research, providing inspiration for more mindful research. As such, it will appeal to scholars of sociology, anthropology and geography with interests in phenomenology, research methods and the role of the mind in the research process.

This text provides an overview of the fundamental principles of computer-aided orthopedic surgery before launching into clinical applications and practical examples of its implementation. Following a question-and-answer format, the authors share their own experiences in the field and impart a wealth of information on image processing, geometric characterizations of human beings, hardware design, development tools, and regulatory constraints. For graduate students, surgeons, and biomedical engineers, this book is a valuable refresher course and explanatory reference in computer-aided surgery.

Research into the geological processes operating on Mars relies on interpretation of images and other data returned by unmanned orbiters, probes and landers. Such interpretations are based on our knowledge of processes occurring on Earth. Terrestrial analog studies therefore play an important role in understanding the geological features observed on Mars. This 2007 book presents direct comparisons between locales on Earth and Mars, and contains contributions from leading planetary geologists to demonstrate the parallels and differences between these two neighboring planets. Mars is characterized by a wide range of geological phenomena that also occur on Earth, including tectonic, volcanic, impact cratering, eolian, fluvial, glacial and possibly lacustrine and marine processes. The book provides terrestrial analogs for data sets from Mars Global Surveyor, Mars Odyssey, Mars Exploration Rovers and Mars Express, and will therefore be a key reference for students and researchers of planetary science.
