The astonishing story of America's airwaves, the two friends—one a media mogul, the other a famous inventor—who made them available to us, and the government which figured out how to put a price on air. This is the origin story of the airwaves—the foundational technology of the communications age—as told through the forty-year friendship of an entrepreneurial industrialist and a brilliant inventor. David Sarnoff, the head of RCA and equal parts Steve Jobs, Jack Welch, and William Randolph Hearst, was the greatest supporter of his friend Edwin Armstrong, developer of the first amplifier, the modern radio transmitter, and FM radio. Sarnoff was convinced that Armstrong's inventions had the power to change the way societies communicated with each other forever. He would become a visionary captain of the media industry, even predicting the advent of the Internet. In the mid-1930s, however, when Armstrong suspected Sarnoff of orchestrating a cadre of government officials to seize control of the FM airwaves, he committed suicide. Sarnoff had a very different view of who his friend's enemies were. Many corrupt politicians and corporations saw in Armstrong's inventions the opportunity to commodify our most ubiquitous natural resource—the air. This early alliance between high tech and business set the precedent for countless legal and industrial battles over broadband and licensing bandwidth, many of which continue to influence policy and debate today.

In Seattle's undead circles, populated by werewolves, devils, and rampaging yetis, Amanda Feral is one of the beautiful zombies. But to maintain her stylish rep, Amanda needs cash. The quickest way: appear on the reality show, American Minions, hosted by lecherous wood nymph Johnny Birch. Soon, Amanda moves in to "Minions Mansion," crowded with immortal fame whores. But even the 24-7 video cameras can't catch everything. . . When Johnny is found incinerated, Amanda channels her inner Miss Marple (minus the fugly cardigans) to find the culprit. Was it Hairy Sue, the white trash stripper yeti? Tanesha, the glamorous trannie werewolf? Angie, the Filipino vampire with a detachable head? Unveiling the killer in a heart-stopping finale won't just save the show from cancellation, it might just keep Amanda alive-or as close as a ghoul can get. . . "Sexy, funny, and twisted. You've never read anything like this!" --Richelle Mead, #1 New York Times bestselling author on Happy Hour of the Damned

With two giant careers, millions in ad dollars--and maybe even an entire network--at stake, David Letterman and Jay Leno faced off over who would host the Tonight Show, the most profitable program in TV history. This is the inside account of this high-pressure confrontation.

Chronicles the policy disputes between Britain and the United States over armed forces radio broadcasting during World War II.

The first time that Apple, Google and Microsoft found themselves sharing the same digital space was 1998. They were radically different companies and they would subsequently fight a series of pitched battles for control of different parts of the digital landscape. They could not know of the battles to come. But they would be world-changing. This new edition of Digital Wars looks at each of these battles

in turn. Accessible and comprehensive, it analyses the very different cultures of the three companies and assesses exactly who are the victors on each front. Thoroughly updated to include information on the latest developments and rising competitors Samsung, it also include a completely new chapter on how China moved from being the assembly plant for music players and smartphones, to becoming the world's biggest smartphone business.

Recipient of the 2015 PEN New England Award for Nonfiction "The arrival of a significant young nonfiction writer . . . A measured yet bravura performance." —Dwight Garner, The New York Times James Joyce's big blue book, Ulysses, ushered in the modernist era and changed the novel for all time. But the genius of Ulysses was also its danger: it omitted absolutely nothing. Joyce, along with some of the most important publishers and writers of his era, had to fight for years to win the freedom to publish it. The Most Dangerous Book tells the remarkable story surrounding Ulysses, from the first stirrings of Joyce's inspiration in 1904 to the book's landmark federal obscenity trial in 1933. Written for ardent Joyceans as well as novices who want to get to the heart of the greatest novel of the twentieth century, The Most Dangerous Book is a gripping examination of how the world came to say Yes to Ulysses.

Mega Man Battle Network reinvented the classic Capcom franchise as an exciting, action-packed RPG, and reintroduced Mega Man to a whole new generation of gamers. Mega Man Battle Network: Official Complete Works collects the stunning artwork of all six Battle Network games, as well as Network Transmission and Operate Shooting Star. Inside you'll find character designs, promotional art, rarely seen pieces, and plenty of creator commentary

The internet stumblings of some of the biggest corporations in the country retraces the ill-placed and spectacularly costly footalls of Time, Disney, News Corps, and many others in cyberspace. 30,000 first printing.

"First published in Great Britain in 2015 by Viking."--Title page verso.

Integrated analysis of the technologies, markets, and business of Residential Broadband In thirty years, the worldwide market for high-speed information services to the home will reach SI trillion. This book explains how and why. Beginning with tutorials and a few touches of history to position residential broadband today, this essential guide examines how competing technologies will struggle for supremacy in a chaotic market. It stakes out the battles between ADSL and cable modems, IP and ATM, telephone companies and CATV companies, televisions and personal computers, and professional applications and consumer applications. It does so with reverence for none-some will win and some will lose as the market emerges over the next decade or so. Our guide is kim Maxwell, an entrepreneur and executive who has spent twenty-five years inventing ways to make communications technologies and markets fit together. His analysis takes some surprising turns: * The Internet will not be the dominant network for residential broadband. * Despite its current power, IP may over time give way to ATM for residential broadband. * Cable modems have the early lead, but the DSL tortoise will catch up. * Fiber to the Home and the Information Superhighway are at least fifteen years away and depend upon HDTV. * Despite regulatory intentions, residential networking will return to a monopoly within thirty years. * Computers and televisions will not converge. * Ethernet will dominate home networking. * Video-on-demand will not be a viable market for at least five years. * In the long run. Consumer applications such as shopping and entertainment will dominate the more near-term applications for Internet access and telecommuting. * But, the market can only begin with the personal computer and its natural applications-Internet access and telecommuting.
