Unplug the washer and remove the top washer panel. Check the wire harness connections between the dispenser actuator and the main electronic control board. Reconnect any loose wires or replace the wire harness if damaged. If the wire connections are okay, check the actuator cam and levers. Replace any damaged linkage components.

After this it will spin and drain again. If the error continues to be an issue, then it could be a bad drain pump or water level pressure switch. It could also be a stopped up water level pressure switch hose. Most commonly if you are certain this is not a suds issue the pump needs to be replaced. The drain pump can be ordered from the link below: This Whirlpool Duet Washer SD error troubleshooting and repair information applies to model GHW9150PW0 and all

F28 means that your main
central control board (CCU)
and the motor control board
(MCU) are not communicating
with one another properly.
You will need to check all
the connections at both
boards, the mcu is in the
bottom of the washer and the
ccu is mounted at the top
inside of the washer on the
right side.
